

## Arachno tutorial cards

In order to better explain the advantages of using, inside your daily routine, of the Arachno technology we prepared a series of **tutorial cards**. Moving to the easier application thought more sophisticated uses, in each card a stepwise pathway will guide to assemble the apparatus as well as to all the tricks involved in running the specific experiment.

ATC#1: Assembling a six 50 mL reactors platform

ATC#2: Working under inert atmosphere

ATC#3: personalize each reactor depending from the chemistry requirement

ATC#4: Heating mixtures (solvent b.p. >100)

ATC#5: Heating mixtures (low b.p. solvents)

ATC#6: Experiments involving large volumes of solvents

ATC#7: Performing a catalytic hydrogenation

ATC#8: Using Arachno as a parallel evaporation
